

Finally, infill framing that always fits.

## A fitting end for infill framing challenges!

Telescopic panels for commercial interior framing are made here in NZ on our Howick X-TENDA 3600.

They cut the need for constant measuring and remeasuring, snipping and adjusting on site. Any doors and windows within the panels are fixed to remain perfectly square at all times. That means you save time, effort and reduce wastage too. And they make levelling up soffit panels a breeze.

Telescopic panels with 2-axis or multi-axis extensions are pre-assembled and compressed for delivery. Frames are strong, lightweight and retractable, so they are easy to move around onsite, even in tight spaces. Then expand and secure for a fitting end, every time.

## Fed-up with infill framing frustrations?

Our new telescopic panels make it easy to frame interiors, even when you have the most uneven and non-level of spaces to deal with. Extendable panels extend upwards and outwards on each side, so they always fit.

# Applications

## Soffit Panels

Soffit Panels adjust up or down across the frame to a set height. This makes accurate levelling up a breeze, as allowance can easily be made on non-level horizontal settings.

Scan the QR code or go to: [bit.ly/3hRveWW](https://bit.ly/3hRveWW) to watch the video

## Multi-Axis Expanding Panels

Multi-Axis Expanding Panels adjust upwards and outwards on **both** sides. This allows for different angles within the available opening.

## Two-Axis Expanding Panels

Two-Axis Expanding Panels adjust upwards and outwards to fill the available opening. Within the frame itself, door and windows remain perfectly square.
